

Smart Meet

Short Summary of your meet !!!

the subject more and more simple so that. there they mostly people come to. development of a program so I'll be. covering in depth each and everything. type of question from this forum I will. at the question you can get asked that I. guarantee you right so the thing is I. will cover those points which are useful. some entrance exams like eight exam the. you follow the sequence because I may be. topics and one more important leanness. for the video quality and audio quality. so your feedback is important for me to. answers forties see algorithm as a. definition it's a common definition. everybody knows that it's a step by step. solving a problem then what is the. let us see the first thing first. difference if you know the software. there are two important phases design. engineering software engineer can write. design time an implementation time so. first you make a design what your. some design and that design your program. the domain knowledge the problems. understand the problem and has the. domain knowledge. better or if you are writing an. administrative staff of an Hospital. I should have. have the mandamus that he is acting as a. designer and here he is acting as a. programmer thanks what is the language. used for writing algorithm you can use. English let language e it will be like. the programmer will be right in a. program fire so designers should. programmers who are working on that. programming language like C C++ Java. languages for developing a program the. next one more important thing is when. you write an algorithm is going to be. she were to the operating system me that. a dependent on hardware and operating. algorithm we analyze an imaginary part. on means you will study them to find out. space we will see what does it mean by. note is mostly in the name of algorithm. we write C language program only so the. everybody knows C language now so. instead of reading some other language. taught so everybody.
