You Summarizer

Short Summary of your Youtube Video !!!

HTML skeleton code first we'll create a. main CSS file and I'm just going to do. CSS and I'm just going to put it right. we'll save this and we can open our. where's this link where is this file. same level as our index.html but say it. dragged this in here. index.html in a browser refresh this now. like this color I want more of a navy. stands for red green blue Google that. the decimal code and so if I decide I. want to use the hex code then I can copy. darker shade of blue it's not black it's. the shape we want now what if we want. the paragraph tag to be italic well we. code we can write div and put these. inside of this tag and so we'll close. equals italic I'll talk more about what. the step in our CSS using its class name. class and then we'll have these open and. and so to do that we just say. now there is a third type of thing that. and all of their text will be italicized. however when using IDs only one div can. ours and so we'll have div class equals. italic now we use our italic class twice. our HTML code will create a new div and. and inside of this div will put hello. save it up going to our CSS we can go. hash tag bold which will select our bold. down below now it would take so much. time to get everything exactly how we. then.
